## A. Adobe Navigation Tools

## B. Manual Organization

---

### Acrobat Navigation Tools

The Navigating tools in Acrobat Reader allow the user to move quickly using links.

The main source of links is the Bookmark pane that should appear on the left and provide a tree of links. Collapsed links have a "+" next to them and can be expanded by putting the mouse cursor on the "+" and clicking.

If the Bookmarks aren't showing then click the "Show Navigation Pane" Icon on the menu bar.

The entries in the alphabetical listing of formation names are linked to the appropriate map, clicking a formation name will take you to the appropriate map. In the maps, the black outlines indicate a link to a more detailed map.

If there are no black outlines on a map then it is possible to zoom in to an area of interest by using the Adobe magnifying glass.

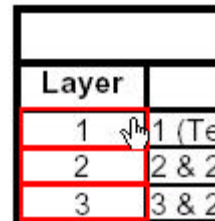

The magnifying glass operates in two modes:

A single click will zoom in by 25 %, centred at the cursor

A held click and drag will show a box and it will zoom to the box when released

The magnifying glass will not work if a link exists. You can tell when a link exists because the cursor (either hand or magnifying glass) will change to a pointed finger over a link.

A table with a red border and a mouse cursor pointing to the first row. The table has three rows and two columns.

Layer	
1	1 (Te
2	2 & 2
3	3 & 2

A useful navigation tool is the forward/back buttons that allow you to backtrack along links.

The "First Page" – Back Page / Next Page – "Last Page" buttons are also useful.

## Organisation

The catalogue has 3 main data sections:

1. Maps of Rw Values by Layer
2. Tables of all Data that passed screening
3. Tables of Mapped Data

### 1. Maps

The Layers correspond to geologic intervals. There is no major geologic significance to the layering, they were derived from the groupings defined in the 1987 Rw Catalogue. See the Figure for details.

There is a main map for each layer and if there are many data points there will be additional, more detailed maps.

The Rw values had four general ranges of values. The ranges and colour scales for Layer 1 and Recharge are unique, The colour scales for Layers 2-12 were selected so that red represents low Rw (<0.1 ohmm), blue represents intermediate Rw (~0.2 ohmm) and green represents higher Rw (~ 0.5 ohmm).

1. Recharge data had the highest range of values and was represented using a scale of 0.0 - 5.0 ohmm

3. Layer 2 to 6 in the Western Basin and all Layers in the North and East Coast had a range of values that was represented using a scale of 0.0 – 0.5 ohmm

2. Layer 1 in the Western Basin had the next highest range of values and was represented using a scale of 0.0 – 2.0 ohmm.

4. Layers 7-12 in the Western Basin had a range that was represented using a scale of 0.0 – 0.2 ohmm

### 2. Tables of Mapped Data

This is a redundant set of tables that includes the subset of data that appears in the maps. Multiple values for a layer in a well resulted in confusing maps. In order to improve the maps, the minimum value of Rw was used and other values were deleted.

### 3. Tables of All Data

These tables include all data points that met the screening criteria. It includes the formation name and depth in the well where the sample was acquired. Also see file 2002RwData.xls
